

When disaster strikes, do you have all the necessary tools to make split second decisions? During a lockdown or reversed evacuation are you able to locate your students and staff? When the emergency response teams arrive, can you inform them as to which rooms are occupied?

As Principal or Crisis Management Supervisor these are decisions that you must make in a moments notice. Having the necessary tools to make these decisions is vital to the safety and security of your students and staff. During a lockdown or internal crisis, knowing which rooms are currently occupied can be vital to the efforts of the emergency response team.

TekVox, Inc. has introduced two new products called TekMonitor and TekMonitorPlus. TekMonitor allow devices like video projectors, lights and security connections to be monitored over a campus network. TekMonitorPlus incorporates a room occupancy sensor and an alarm with a TekMonitor in an easy to install plenum box. Using a TekVox software application called TekManager a visual representation of occupied room's can be displayed on any computer.

Benefits

- Improves emergency response time
- Increases administrator productivity
- Adds reliable security
- Reduces maintenance and energy costs
- Easy to install
- No Site Licensing Fees
