

### Monitoring an Extron System 5IP with TekManager

The Extron presentation switchers like the System 5IP are easily remotely monitored and controlled by TekManager. This is accomplished by configuring a TEK 1 as a TekTranslator. When using a TEK 1 as a TekTranslator, other control systems and presentation equipment can be monitored and remotely controlled by TekManager.

To operate a TEK 1 with a System 5IP all that is required is to connect the RS-232 Com Port on the TEK 1 to the RS-232 Control Port on the System 5IP and load an Extron System 5 driver into the TEK 1 using TekWizard. There are no modifications required for the System 5IP, and the projector is still controlled by the System 5IP.

#### Benefits

- Easy Configuration, monitor and control with TekManager/TekWizard
- Reliable Security
- Improves Asset Management
- Increases Lamp Life
- Lowers Energy Cost

#### Features

- Instant Email Security Alerts
- Independent Lamp and Filter Timers
- Monthly Usage Reports
- Easy Integration with Occupancy Sensor
- Lockout controls for both the video projector and the System 5IP
