

Intelligent Display Control

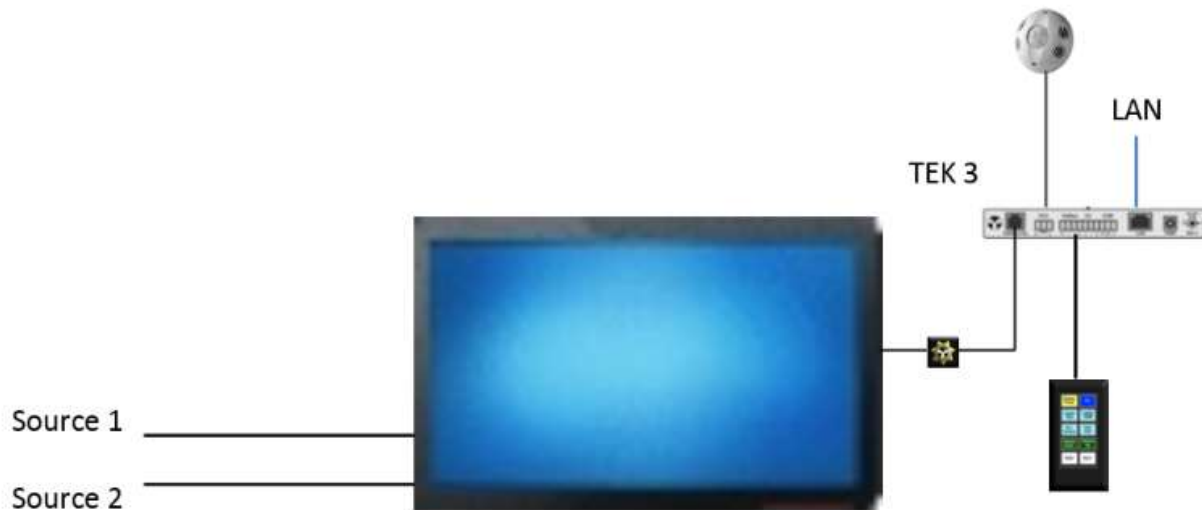

71002 Data Sheet

The TEKVOX 71002 Intelligent Display Control Drop-In is the world's lowest-cost fully-managed A/V control system for flat panel displays. Using a TEK3 TekMonitor control system, this package provides users with simple control of a single display's basic functionality, adding occupancy-based automation, anti-theft protection, and remote management.

A single TEK3, easily installed behind the display, provides power, volume, and switching control of the display. The ceiling-mounted occupancy sensor allows rooms to power off when vacant, and activate once occupied. The wall or table-mountable TekTouchPad provides a simple control interface, with up to 32 individual, programmable buttons. The connected display is protected against theft by TekSecurity monitoring hardware.

Features:

- Simple, intuitive control of single display's power, volume, and switching
- Remote management, use monitoring & occupancy-based automation
- Real-time anti-theft protection with TekSecurity
- Easy, unobtrusive behind-display mounting for clean, easy installation
- Options available for alternate touchscreen controllers & room sizes
- Shipped fully functional, pre-programmed, and rigorously tested
- Flexible selection of AV wall plates & cables available
