

Intelligent Display Control

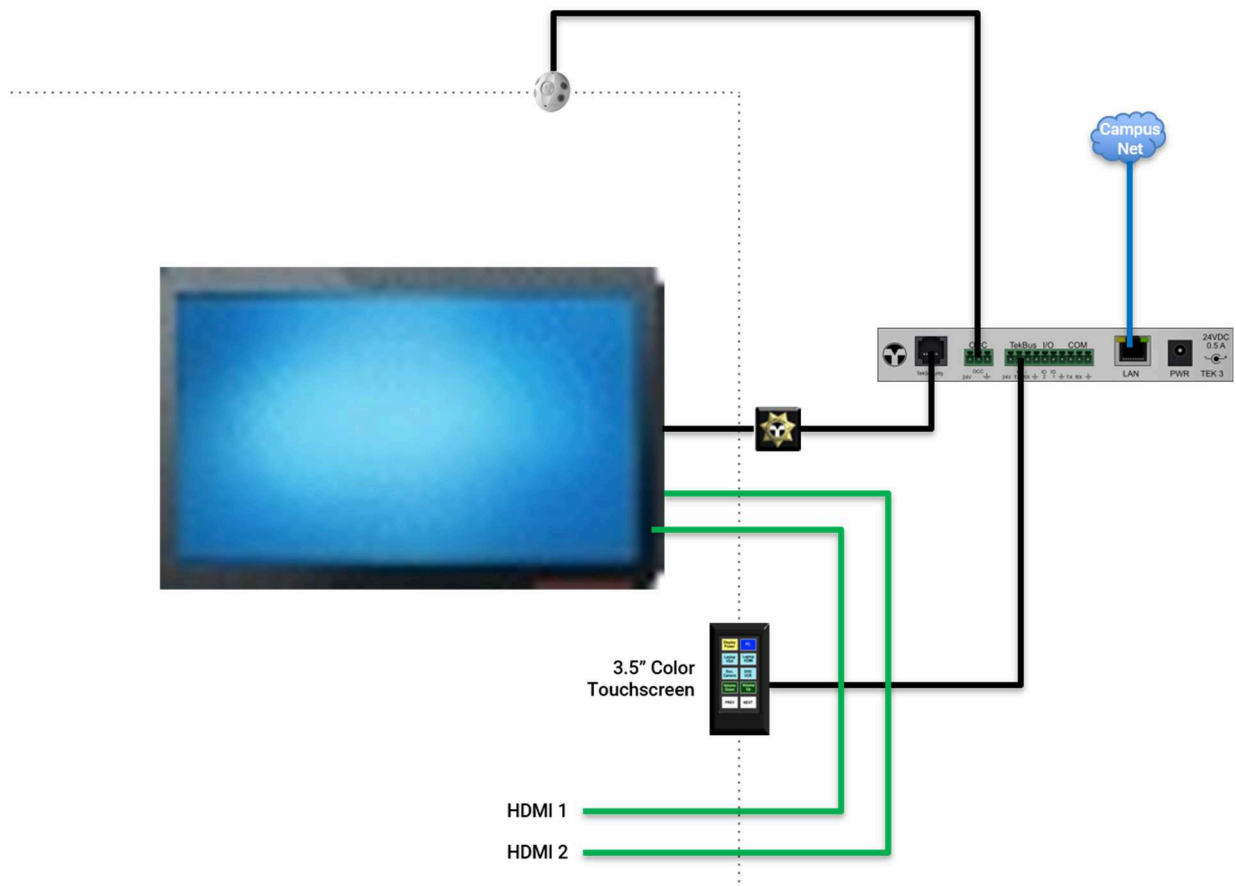

71002-DI Data Sheet

The 71002-DI Drop-In offers a fully-managed, automated control system for a single flat-panel display. With support for any commercially available display thanks to TEKVOX's robust library of control drivers, this Drop-In transforms any display into a simple A/V system.

An occupancy sensor allows the display to power on when needed and power off when the space is vacant, saving time and electricity with no additional effort. A preprogrammed 3.5" TekTouchPad provides intuitive, comprehensive control of display power, audio volume, and source selection, and TekSecurity anti-theft hardware protects the valuable equipment from theft or vandalism. As with all TEKVOX Drop-Ins, the 71002 allows for remote support & management, as well as maintenance tracking and status reporting.

Features:

- Simple, intuitive control of a single display's power, volume, and video switching
- Remote management, use-monitoring & occupancy-based automation
- Real-time anti-theft protection with TekSecurity
- Easy, behind-display mounting for quick, clean installation
- Options available for different touchscreen displays & room sizes
- Shipped fully functional, pre-programmed, and rigorously tested

Intelligent Display Control

71002-DI Technical Specifications

Inputs	As determined by display model
Supported Resolution	As determined by display model
User Interfaces Supported	3.5" TekTouchPad (default)
Additional Features	TekSecurity Anti-Theft Protection Occupancy-Based Automation
