

Room Microphones

710BP-Room_Mics Data Sheet

The 710BP-Room_Mics Drop-In Booster Pack consists of a fully-integrated system of array microphones for capturing crystal-clear audio in any room, as well as an audio DSP for performing echo-cancelling and mixing. All ceiling microphones come mounted on clear plates to ensure easy installation and high-quality sound pickup.

Each included array microphone picks up sound in a wide arc, ensuring consistent, full-room sound and clear pickup from anywhere in the room. All microphones are connected to the DSP, which dynamically adjusts, filters, and enhances room audio to ensure that everyone is heard, loud sounds are dampened, and any noise or echoing is entirely filtered out. Audio is routed to and from a video conferencing PC (not included) for a clean, easy-to-use video conferencing experience, every time. Once adjusted, filtered, and mixed, the microphones are routed to an audio amplifier to be played over the room's speakers.

Features:

- Includes six high-quality, pre-mounted array microphones for impressive room audio
- Audio DSP performs echo & noise cancellation, and mixes microphone audio
- USB connection to PC makes system perfect for integrated full-room video conferencing
- All ceiling mics include mounting plates for effortless installation & clear sound pickup
- Shipped fully functional, pre-programmed, and rigorously tested
