

# Eco+ VTC Drop-In

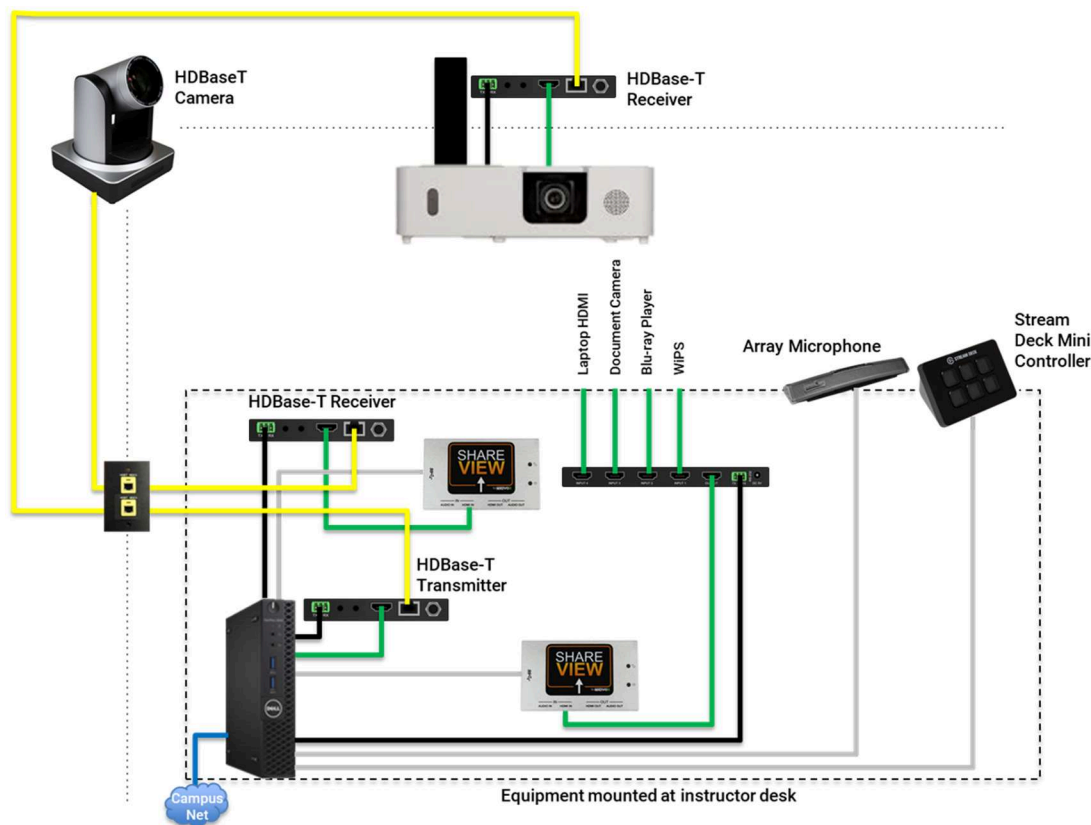

## 71204-DLC Data Sheet

The 71204-DLC provides distance learning and video conferencing capabilities to a small, entry-level classroom or training room. This Drop-In expands on the functionality of the 71202-DLC by adding support for up to four sources, all of which can be shared in a video conference alongside classroom footage without any additional hardware or programming.

The Eco+ VTC Drop-In employs a unified hardware-software solution to eliminate unnecessary equipment, making every installation clean & professional without sacrificing functionality. With TEKVOX's revolutionary ShareView™ technology, presenters can broadcast classroom video and lesson content simultaneously from a single interface. HDBaseT transmission carries audio, video, control signals, and power over a single cable for a professional, streamlined installation that just works, every time. The StreamDeck Mini controller provides convenient, responsive control of audio volume, display power, source selection, and camera movement, while an array microphone automatically tracks the presenter to produce crisp, reliable audio.

### Features:

- Incredibly smooth, high-quality video from full-HD PTZ camera with 12x optical zoom
- ShareView™ allows simultaneous presentation of instructor video & lesson content
- Supports four local sources (i.e. document camera, Blu-ray players), all remotely shareable
- StreamDeck Mini Controller provides clear, powerful control of system in single interface
- Array microphone supplies crystal-clear audio with built-in AEC for echo-free conferencing
- Compatible with any videoconferencing software (Skype, Zoom, BlueJeans, Teams, etc...)
